

ABSTRACT OF THE DISCLOSURE

A dual-beam lantern-flashlight capable of emitting two light beams, including an elongated flashlight body having a front end and a rear end, a headlamp mounted in the front end of the body and disposed to emit a beam of light in a forward direction from the front end, a lantern body coupled to the flashlight body, the lantern body having a bottom end, and a lantern lamp mounted in said bottom end of said lantern body and disposed to emit a beam of light generally downwardly and normally relative to the beam of light emitted by said headlamp. The headlamp and lantern lamp when in use together create a single large area of continuous light around the feet and forward of the user.
